**DIAGNOSTIC DEVICES, INC. INTRODUCES  
ITS NEWLY DESIGNED NO-CODING, NON-  
TALKING PRODIGY POCKET™ METER**

The Prodigy Pocket™, a blood glucose monitoring system, uses the same proven technology as the Prodigy AutoCode® in a colorful, compact design.

CHARLOTTE, NC –January 30, 2009—The Prodigy Pocket™ no-coding meter has a small sleek design, one button for easy use and provides accurate test results in less than seven (7) seconds. Diagnostic Devices, Inc., the makers of Prodigy Meters and an American based company, holds its products to the highest standards of quality and is committed to being the industry’s new technology leader.

Another great advantage of the Prodigy Pocket™ Meter is that it is available in four different vibrant colors. It gives you the option to pick the pocket that fits your personality; making diabetes management a bit more *personal* and a little less clinical. The one-button and large easy-to-read screen offers the diabetes patient **simple, quick and accurate** blood glucose test results without the complexity of added, unrelated features.

All of Prodigy’s new meters now have a standard USB port which uses any standard USB cable to connect the meter to your PC to easily download test results using Prodigy’s free Diabetes Management Software, available at [prodigymeter.com](http://prodigymeter.com).

Data shows that Prodigy’s test strips are extremely accurate (greater than 98%), exceeding the industry’s standards of 95%, thus allowing the diabetic patient to feel more confident and comfortable with their diabetes management.

Prodigy® meters are available throughout most mail-order distributors and upon request in major retail stores.

For more information about the Prodigy Pocket™ visit [www.prodigymeter.com](http://www.prodigymeter.com) or call Diagnostic Devices, Inc. at 1-800-366-5901.
